SOURCE DESCRIPTION:

Kentucky Cabinet Corporation located in Corbin, Kentucky manufactures kitchen and bath cabinetry. There is woodworking associated with the process, gluing operations, and finishing. The pollutants of concern are particulate matter, VOC and HAP. Particulates from the woodworking operations will be controlled by a baghouse. The adhesive used is a low VOC and

HAP product. The majority of the VOC and HAP are emitted from 3 spray booths used for finishing operations. Potential emissions of VOC and HAP are greater than major source thresholds, but Kentucky Cabinet Corp. has requested Federally Enforceable Limits on the potential to emit.

MINOR PERMIT REVISION FOR INSTALLATION OF A BAGHOUSE:

The source is changing the particulate filtration system used for the woodworking processes. Currently, there are multiple small dust collecting units which exhaust into the building enclosure. These smaller filters are to be replaced by a single large baghouse to be located outside of the building. The new baghouse will exhaust directly to the ambient air, however the new collection system is considered to be more efficient than the smaller portable units, resulting in a reduction in the PTE for particulates of 11.2 TPY.

EMISSIONS AND OPERATING CAPS DESCRIPTIONS:

Kentucky Cabinet Corporation has requested voluntary permit limits of less than 9.0 tons per year of individual hazardous air pollutants (HAP), less than 22.5 tons per year of combined HAPs, and less than 90 tons per year of VOC.

OPERATIONAL FLEXIBILITY:

The source is not restricted as to hours of operation or quantity of product produced while remaining within the caps above.
